

THE PROBLEM

Your front desk *can't keep up.*

Every missed call is a patient who books with someone else. Every expired prior auth is a procedure you don't get paid for. Every denial your biller doesn't chase is revenue gone.

63%

of inbound patient calls went unanswered at one psychiatric practice we audited.

\$80K+

in preventable denials at that same practice in a single year.

WHAT MINDBILL DOES

One AI that runs the whole front office.

- ✓ **Answers every call, 24/7**
Inbound, after-hours, overflow — every line
- ✓ **Verifies insurance live on the call**
Eligibility checked while the patient is on the line
- ✓ **Books patients into your EHR**
Straight into your calendar — no rekeying
- ✓ **Files TMS & Spravato prior auths overnight**
Plus REMS — submitted while you sleep
- ✓ **Calls payers for claim status & denial reasons**
The phone work your biller never gets to
- ✓ **Drafts appeals, flags denials before they happen**
Catches the problem before the claim goes out

BUILT FOR HOW PSYCHIATRY BILLS

It already knows *your playbook.*

**TMS · Spravato · Ketamine · Med
Mgmt**

Plugs into AdvancedMD, Tebra, Osmind & Availity — or whatever you run.

**Setup in days.
Month-to-month.
2% of collections.**

See it take a real call.
